

Cornerstone OnDemand

M05 L04 Lab Guide

Cornerstone

Module: M05 — Pre-Migration Validation Checklist Execution

Lesson: 4 of 4

Difficulty: Apply (Bloom Level 3)

Estimated Hands-On Time: 20 minutes (approximately 14 minutes of active practice)

Contents

1. Lab Overview
2. Your Sandbox Environment
3. Configuration Template
4. Step-by-Step Instructions
5. Troubleshooting Quick Reference
6. Checkpoints and Validation
7. Solution Reference

1. Lab Overview

Exercise Title: UAT Sign-Off Objection Scenario — Meridian Financial

Difficulty Level: Apply — you will apply the UAT sign-off criteria and the feature parity gap communication framework to a realistic stakeholder objection scenario. There is no single "correct script," but there are specific factual requirements your response must meet.

Estimated Hands-On Time: 20 minutes total — approximately 6 minutes of orientation content followed by 14 minutes of active practice.

What You Will Build

By the end of this lab you will have produced two deliverables:

1. A written objection response to a business owner (VP of Learning at Meridian Financial) who is refusing to sign off on production migration because Leaderboard is unavailable
2. A completed UAT Test Results Summary documenting the Leaderboard gap and recommending APPROVED FOR PRODUCTION MIGRATION

Enabling Objective

Conduct customer-side testing per the defined UAT protocol — validating critical workflows, data integrity, and configuration in the Stage environment — and obtain sign-off from the appropriate decision-makers (admin, IT, business owner) before migration proceeds.

Prerequisites

Before starting this lab, you should have completed:

- Lesson 1: Execute the Pre-Migration Validation Checklist (M05)
- Lesson 2: Convert Dynamic Groups to Static Groups (M05)
- Lesson 3: Rebuild Email Notification Templates (M05)
- M03 module content, specifically the feature parity gap communication framework — a reference card from M03 is provided as a job aid in this lab (see Section 3)

2. Your Sandbox Environment

This lab does not require live system access. All work is completed using the provided scenario documents and templates.

Materials Provided

Material	Description
UAT Scenario Brief — Meridian Financial	Describes the customer's UAT status: all Critical and High issues resolved; business owner (VP of Learning) refusing sign-off due to Leaderboard unavailability
UAT Test Results Summary (partially completed)	All workflow validation sections are pre-filled as passed; the Leaderboard gap is flagged but not yet classified or documented
Feature Parity Gap Communication Framework Reference Card	Job aid from MO3 — the approved framework for communicating feature gaps to customers, including approved and prohibited language
Leaderboard Feature Parity Fact Sheet	What Leaderboard is, why it is not available in the initial migration, the roadmap target, and what partial gamification continuity exists

Pre-Provisioned Information

The following facts are established in the scenario — you do not need to research or verify them:

- All Critical and High UAT issues for Meridian Financial have been resolved
- Learner workflows, manager workflows, admin workflows, data integrity, and configuration validation sections of the UAT Test Results Summary are complete and passing
- The Leaderboard gap is the only outstanding item preventing sign-off
- The VP of Learning uses Leaderboard for quarterly sales training engagement tracking

3. Configuration Template

This lab uses a document template rather than a system configuration file. The UAT Test Results Summary has two sections you will complete. Reference this structure as you work through the procedures.

UAT Test Results Summary — Sections You Will Complete

KNOWN GAPS SECTION	
Feature / Function:	<name the feature>
Gap Type:	Expected Limitation ☐ / Critical Issue ☐ (check one)
Description:	<what the gap is and why it exists>
Roadmap Target:	<use approved language – see Warning below>
Interim Alternative:	<what partial continuity exists, if any>
Priority:	Critical ☐ High ☐ Medium ☐ Low ☐
Action Required Before Production Migration:	Yes ☐ No ☐
RECOMMENDATION SECTION	
Recommendation:	APPROVED FOR PRODUCTION MIGRATION ☐ CONDITIONAL APPROVAL ☐ NOT APPROVED ☐
Outstanding Items:	<list any items to be resolved post-migration> Item: Priority: Roadmap Target: Action Required Before Migration:
Customer Sign-Off:	_____ Date: _____
CSM Approval:	_____ Date: _____

⚠ Warning: The Roadmap Target field requires specific approved language. Do NOT write "will be available by March 2027" or any phrasing that commits to a delivery date. The only approved phrasing is "tentatively targeted for March 2027." Promising a specific delivery date is the most consequential error in this exercise — it exposes Cornerstone and your customer to a commitment that the roadmap does not support.

Feature Parity Gap Communication Framework — Key Fields

The MO3 reference card structures your objection response around four elements. Use this as your drafting checklist:

OBJECTION RESPONSE STRUCTURE
1. Acknowledge the gap What is the feature, and do you confirm it is not available?
2. Explain why Is this a technical limitation, a scope decision, or a known gap with a roadmap target?
3. State the roadmap target (approved language only) "tentatively targeted for [timeframe]" – never a firm commitment
4. Identify partial continuity What does the customer still have that addresses part of the need?

4. Step-by-Step Instructions

Procedure 1 — Orient to the UAT Environment and Sign-Off Criteria

Step 1 — Distinguish Stage from Pilot

Review the environment definitions below before working through the scenario. Understanding which environment you are in — and when — is essential context for the sign-off decision.

Environment	When It Exists	Purpose	Duration
Stage	One week before Pilot migration	Smoke testing and pre-migration validation	2–3 days (Mon–Wed before Pilot Friday)
Pilot	After Pilot migration executes	Full UAT validation	Up to 4 weeks (goal: 2 weeks)

The Meridian Financial scenario takes place in the Pilot environment — the Pilot migration has already executed, and the UAT validation window is open. Stage validation is complete.

 **Concept:** Stage is a copy of Production used to confirm that pre-migration work is in order before the Pilot migration runs. Pilot is where the actual migrated environment lives and where UAT occurs. These are sequential, not parallel — you validate in Stage, then migrate to Pilot, then run UAT in Pilot.

 **Screenshot** — Diagram or reference card showing the Stage → Pilot → Production sequence with the 2–3 day Stage window and up to 4-week Pilot/UAT window labeled

Step 2 — Review the Seven UAT Testing Areas

Familiarize yourself with the seven categories of UAT validation. In the Meridian Financial scenario, all seven areas have been tested and the results are pre-populated in the UAT Test Results Summary.

#	Testing Area	What It Validates
1	Learner Workflows	Login, transcript visibility, content discovery, enrollment, skills, course player
2	Manager Workflows	Manager dashboard, team progress, course recommendations, team reports
3	Admin Workflows	Unified admin console, user/group management, content visibility, security roles, notifications
4	Data Integrity	User records, assignments, transcripts, skills data, group memberships, UGC visibility
5	Configuration Validation	Security roles, groups, home page, unified navigation, manager dashboard, profile pages
6	Post-Migration Rebuild Validation	Notification templates, custom reports, third-party integrations, deeplinks
7	Known Gaps & Workarounds	Live Events, Project SmartCards, private UGC, Analytics+ reports

Tip: In a real UAT engagement, you would work through each of these seven areas systematically over the 2–4 week window. In this scenario, the work is done — your job is to handle the sign-off objection that arose after testing was complete.

Step 3 — Confirm the Sign-Off Criteria

Before addressing the objection, confirm what the sign-off criteria actually require. Read the criteria carefully — they determine whether the Leaderboard gap is a blocker.

Sign-off is appropriate when:

- Critical workflows have been validated across all seven testing areas
- All **Critical** issues have been resolved
- All **High** issues have been resolved

Sign-off is NOT blocked by:

- Medium or Low priority issues (these are documented and resolved post-production migration)
- Known feature gaps that are expected limitations of the initial migration

Warning: The sign-off criteria are the foundation of your objection response. If you cannot articulate why the Leaderboard gap does not meet the definition of a Critical issue, your response will not be persuasive — and you risk either delaying the migration unnecessarily or making an unauthorized commitment to resolve the gap before migration.

 **Screenshot** — Sign-off criteria reference — the two conditions (critical workflows validated, Critical issues resolved) displayed as a checklist or decision card

Procedure 2 — Analyze the Objection

Step 4 — Read the UAT Scenario Brief

Open the UAT Scenario Brief — Meridian Financial and read it in full before drafting any response.

As you read, note the following:

- Which UAT testing areas are complete and passing
- What the VP of Learning's specific objection is
- How Leaderboard is currently used at Meridian Financial (quarterly sales training engagement tracking)
- What the VP of Learning is threatening to do (withhold sign-off)

 **Screenshot** — UAT Scenario Brief document — first page showing customer name, UAT status summary, and the VP of Learning's objection statement

Step 5 — Apply the Sign-Off Criteria to the Leaderboard Gap

Work through this decision:

1. Is Leaderboard unavailability a **data loss** or **critical workflow failure**? Review the seven UAT testing areas — does Leaderboard appear as a required workflow in any of them?
2. Is Leaderboard unavailability a **security role or permissions issue**?

3. Is Leaderboard unavailability a **known gap** — an expected limitation of the initial migration that was disclosed in advance?

Concept: The escalation framework during UAT defines Critical issues as data loss or critical workflow failures (2-hour response, GCS → Engineer). A feature that was never in scope for the initial migration — and that Cornerstone has documented as a known gap — is not a Critical issue. It is an expected limitation. The distinction matters because Critical issues block sign-off; expected limitations do not.

Checkpoint: Before moving to Procedure 3, confirm your analysis: Is the Leaderboard gap a Critical issue or a known gap / expected limitation? Write your determination in one sentence. If you determined it is a Critical issue, re-read the sign-off criteria and the Leaderboard Feature Parity Fact Sheet before proceeding.

Step 6 — Review the Leaderboard Feature Parity Facts

Open the Leaderboard Feature Parity Fact Sheet and confirm the following four facts. You will use all four in your objection response.

Fact	Source
Leaderboard will not be included in the initial Single Architecture migration	Source 1 — Feature parity table
A unified leaderboard is tentatively targeted for March 2027	Source 4 — FAQ Question 4
Badges will be migrated and will eventually be unified across LMS and LXP	Source 4 — FAQ Questions 4 and 34
A new form of gamification is being developed as a replacement	Source 4 — FAQ Questions 33 and 34

Warning: "Tentatively targeted for March 2027" is the only approved phrasing for the roadmap reference. Do not say "will be available by March 2027," "is scheduled for March 2027," or "is planned for Q1 2027." These phrasings imply a commitment that the roadmap does not support. The approved language acknowledges the target while preserving Cornerstone's ability to adjust the roadmap.

Procedure 3 — Draft the Objection Response

Step 7 — Open the Feature Parity Gap Communication Framework Reference Card

Open the Feature Parity Gap Communication Framework Reference Card from M03. This is your structural guide for the response — use the four-element framework to organize your draft.

The four elements are:

1. Acknowledge the gap
2. Explain why
3. State the roadmap target (approved language only)
4. Identify partial continuity

Screenshot — Feature Parity Gap Communication Framework Reference Card — the four-element structure visible, with the "approved language" and "prohibited language" sections highlighted

Step 8 — Draft Your Written Objection Response

Draft a written response to the VP of Learning at Meridian Financial. Your response should be addressed to the VP directly and written in a professional, factual tone — not defensive, not apologetic, and not making any commitments beyond what the approved facts support.

Your response must include all of the following:

- ☐ Acknowledgment that Leaderboard is not available in the initial migration
- ☐ Explanation that this is a known gap — an expected limitation of the initial migration, not a failure of the UAT process or the migration itself
- ☐ The roadmap target using approved language: "tentatively targeted for March 2027"
- ☐ Identification of partial gamification continuity: badges will be migrated
- ☐ Reference to the new form of gamification being developed
- ☐ A clear statement that the sign-off criteria have been met — critical workflows are validated and all Critical issues are resolved — and that the Leaderboard gap does not constitute a Critical issue blocking production migration

 **Tip:** Your response does not need to be long. A focused, factual 3–4 paragraph response is more effective than a lengthy explanation. The VP of Learning needs to understand three things: (1) this gap was expected and disclosed, (2) there is a roadmap target, and (3) the migration is ready to proceed.

☒ **Best practice:** When communicating feature parity gaps to business stakeholders, lead with what IS available before addressing what is not. In this case: badges are migrating, a new gamification experience is in development, and the roadmap target is March 2027. The gap is real — but the story is not "you are losing gamification." The story is "gamification is evolving, and here is what the transition looks like."

 **Screenshot** — Blank or partially completed objection response document — showing the four-element structure as section headers with space for the learner's draft

Step 9 — Review Your Draft Against the Prohibited Language List

Before finalizing your response, check it against the prohibited language list from the Feature Parity Gap Communication Framework.

Prohibited phrases — remove any of these from your draft:

Prohibited	Why	Approved Alternative
"will be available by March 2027"	Implies a firm delivery commitment	"tentatively targeted for March 2027"
"is scheduled for March 2027"	Implies a firm delivery commitment	"tentatively targeted for March 2027"
"is planned for Q1 2027"	Implies a firm delivery commitment	"tentatively targeted for March 2027"
"we will have Leaderboard back by [date]"	Promises a specific feature by a specific date	Describe the roadmap target with "tentatively targeted" language
"this is a temporary limitation"	Implies a guaranteed fix timeline	"this is a known gap with a roadmap target"

 **Warning:** Promising a specific delivery date for Leaderboard is the most consequential error in this exercise. If a customer relies on a date you provided and Cornerstone adjusts the roadmap, you have

created a trust and contractual risk. The "tentatively targeted" language exists precisely to communicate the roadmap honestly without creating a commitment.

Procedure 4 — Complete the UAT Test Results Summary

Step 10 — Open the Partially Completed UAT Test Results Summary

Open the UAT Test Results Summary template. Review the pre-populated sections:

- Learner Workflows: ☒ Validated
- Manager Workflows: ☒ Validated
- Admin Workflows: ☒ Validated
- Data Integrity: ☒ Validated
- Configuration Validation: ☒ Validated
- Post-Migration Rebuild Validation: ☒ Validated (in progress — notifications and reports rebuilding per plan)
- Known Gaps & Workarounds: ☐ Leaderboard — flagged, not yet classified

Your task is to complete the Known Gaps section and the Recommendation section.

 **Screenshot** — UAT Test Results Summary — partially completed, showing the validated sections with checkmarks and the Leaderboard gap row flagged but empty in the classification and documentation fields

Step 11 — Document the Leaderboard Gap in the Known Gaps Section

Complete the Known Gaps section for the Leaderboard gap using the facts from Step 6 and the template structure from Section 3.

Fill in each field:

Feature / Function: Enter the feature name.

Gap Type: Select the correct classification. Based on your analysis in Step 5, is this an Expected Limitation or a Critical Issue?

Description: Write a brief, factual description of the gap — what Leaderboard is, why it is not available in the initial migration, and that this is a known, disclosed limitation.

Roadmap Target: Use approved language only. Do not enter a firm date.

Interim Alternative: Identify what partial gamification continuity exists for Meridian Financial.

Priority: Assign the correct priority level. A feature gap with a roadmap target and no impact on critical workflows or data integrity is not Critical or High.

Action Required Before Production Migration: Based on the sign-off criteria, is any action required before migration proceeds?

Checkpoint: Review your Known Gaps entry. Confirm: (1) Gap Type is "Expected Limitation," not "Critical Issue." (2) Roadmap Target uses "tentatively targeted" language. (3) Priority is Low. (4) Action Required Before Production Migration is No. If any of these are incorrect, revise before proceeding to Step 12.

 **Screenshot** — UAT Test Results Summary — Known Gaps section with the Leaderboard row partially filled in, showing the field labels and the learner's entries visible

Step 12 — Select the Recommendation and Document Outstanding Items

Complete the Recommendation section of the UAT Test Results Summary.

Recommendation: Select the appropriate recommendation based on the sign-off criteria. All Critical and High issues are resolved. Critical workflows are validated. The only outstanding item is a known gap with a roadmap target.

Outstanding Items: Document the Leaderboard gap as an outstanding item using the following structure:

- Item: Leaderboard unavailability
- Priority: Low
- Roadmap Target: [use approved language]
- Action Required Before Migration: No — expected limitation; roadmap target documented; no customer or partner action required before production migration

 **Concept:** The Outstanding Items section of the UAT Test Results Summary is not a list of blockers — it is a record of known items that will be tracked post-migration. Documenting the Leaderboard gap here is the correct action: it creates a paper trail that the gap was known, disclosed, and accepted by the customer as part of the sign-off decision. This protects both Cornerstone and the customer.

 **Screenshot** — UAT Test Results Summary — Recommendation section showing the APPROVED FOR PRODUCTION MIGRATION option selected and the Outstanding Items section with the Leaderboard gap documented

Procedure 5 — Review and Validate Before Submitting

Step 13 — Run the Pre-Submission Checklist

Before submitting your deliverables, verify each item in the checklist below. Do not skip this step — the most common errors in this exercise are caught here.

Objection Response:

- ☐ Uses "tentatively targeted for March 2027" — not a firm date commitment
- ☐ Acknowledges the gap factually without being defensive or apologetic
- ☐ Mentions badges as partial gamification continuity
- ☐ References the new form of gamification being developed
- ☐ States clearly that the sign-off criteria are met and migration is ready to proceed
- ☐ Does not recommend delaying production migration

UAT Test Results Summary:

- ☐ Leaderboard gap is classified as Expected Limitation — NOT Critical Issue
- ☐ Roadmap Target field uses "tentatively targeted" language — no firm date
- ☐ Priority is Low
- ☐ Action Required Before Production Migration is No
- ☐ Recommendation is APPROVED FOR PRODUCTION MIGRATION
- ☐ Outstanding Items section documents the Leaderboard gap with Low priority and March 2027 roadmap target

 **Warning:** If your UAT Test Results Summary shows **CONDITIONAL APPROVAL** or **NOT APPROVED**, review the sign-off criteria again. The conditions for **APPROVED** are

met: critical workflows are validated and all Critical issues are resolved. A feature gap does not change the recommendation

it is documented in Outstanding Items, not used to downgrade the recommendation.

Step 14 — Submit Your Deliverables

Submit both deliverables:

1. Your written objection response to the VP of Learning
2. Your completed UAT Test Results Summary

Your instructor or the course system will compare your submissions against the success criteria in Section 6.

5. Troubleshooting Quick Reference

Symptom	Cause	Fix
You wrote "will be available by March 2027" in your response	Using firm commitment language instead of approved roadmap language	Replace with "tentatively targeted for March 2027." Review the prohibited language list in Step 9 and the Feature Parity Gap Communication Framework reference card.
You classified the Leaderboard gap as a Critical Issue in the UAT Test Results Summary	Confusing a feature gap with a critical workflow failure	Re-read the sign-off criteria (Step 3) and the escalation framework (Step 5). A Critical issue is data loss or a critical workflow broken — not a feature that was never in scope for the initial migration. Reclassify as Expected Limitation.
You selected CONDITIONAL APPROVAL or NOT APPROVED as the recommendation	Treating the Leaderboard gap as a blocker	Review the sign-off criteria: all Critical and High issues are resolved, and critical workflows are validated. The sign-off threshold is met. Leaderboard is documented in Outstanding Items, not used to downgrade the recommendation. Change to APPROVED FOR PRODUCTION MIGRATION.
You recommended delaying production migration in your objection response	Treating a known gap as a reason to delay	A known, disclosed feature gap with a roadmap target is not a reason to delay production migration. The migration is ready. Your response should explain this to the VP of Learning, not validate the delay request. Revise your response to affirm that migration should proceed.
You could not identify partial gamification continuity	Not reviewing the Leaderboard Feature Parity Fact Sheet before drafting	Badges will be migrated and will eventually be unified across LMS and LXP capabilities. This is the interim alternative. Return to Step 6 and add this to your response.
Your objection response does not mention why Leaderboard is unavailable	Addressing the "what" without the "why"	The VP of Learning needs to understand that this is an expected limitation of the initial migration — not a failure. Add a sentence explaining that Leaderboard was not in scope for the initial migration and that this was a known, disclosed gap.
You assigned High or Medium priority to the Leaderboard gap	Overweighting the business impact relative to the sign-off criteria	Priority in the UAT Test Results Summary reflects the impact on migration readiness and critical workflows — not the business importance of the feature to the customer. Leaderboard has no impact on critical workflows or data integrity. Priority is Low.

6. Checkpoints and Validation

Checkpoint A — Sign-Off Criteria Analysis (after Step 5)

What you are confirming: That you correctly applied the sign-off criteria to the Leaderboard gap before drafting your response.

How to confirm it: Your one-sentence determination from Step 5 should read something like: "The Leaderboard gap is a known gap / expected limitation — it does not constitute a Critical issue and does not block sign-off."

If your determination says it IS a Critical issue: Re-read the sign-off criteria and the escalation framework definition of Critical issues (data loss or critical workflow broken). Leaderboard is a feature that was never in scope for the initial migration — it is not a workflow that was working and is now broken. Revise your determination.

Checkpoint B — Objection Response Language (after Step 9)

What you are confirming: That your objection response uses approved language and does not make unauthorized commitments.

How to confirm it: Search your response for the following strings. If any appear, revise:

- "will be available by" → replace with "tentatively targeted for"
- "is scheduled for" → replace with "tentatively targeted for"
- "is planned for" → replace with "tentatively targeted for"
- "temporary limitation" → replace with "known gap with a roadmap target"

If you cannot find a roadmap reference in your response at all: You have omitted a required element. Add a sentence using "tentatively targeted for March 2027."

Checkpoint C — Known Gaps Classification (after Step 11)

What you are confirming: That the Leaderboard gap is correctly classified in the UAT Test Results Summary.

How to confirm it: Verify all four fields:

Field	Required Value
Gap Type	Expected Limitation (not Critical Issue)
Roadmap Target	"tentatively targeted for March 2027" (or equivalent approved phrasing)
Priority	Low
Action Required Before Production Migration	No

If any field is incorrect: Return to Step 11 and revise. Do not proceed to Step 12 until all four fields are correct.

Checkpoint D — Final Recommendation (after Step 12)

What you are confirming: That the UAT Test Results Summary recommendation is correct and the outstanding items section is complete.

How to confirm it:

- Recommendation field: APPROVED FOR PRODUCTION MIGRATION
- Outstanding Items: Leaderboard gap listed with Low priority, "tentatively targeted for March 2027" roadmap target, and "No action required before production migration"

If the recommendation is CONDITIONAL or NOT APPROVED: Review the sign-off criteria one more time. The threshold is met. Change the recommendation to APPROVED and move the Leaderboard gap to Outstanding Items.

7. Solution Reference

Objection Response — Model Answer

The following is a model response that meets all success criteria. Your response does not need to match this word-for-word — but it must include all of the required elements.

Dear [VP of Learning],

Thank you for your thorough review of the UAT results. I want to address your concern about Leaderboard directly.

Leaderboard is not included in the initial Single Architecture migration. This is a known, disclosed limitation — it was identified during the pre-migration readiness assessment and is documented in the feature parity gap register that was shared at the start of the migration engagement. It is not a failure of the migration process or of the UAT validation.

On the roadmap: a unified leaderboard is tentatively targeted for March 2027. I want to be clear that "tentatively targeted" means Cornerstone has this on the roadmap with a target timeframe — it is not a firm delivery commitment, and I am not able to guarantee a specific date. What I can tell you is that Cornerstone is actively developing a new form of gamification as part of the Single Architecture roadmap.

In the meantime, badges will be migrated as part of the initial migration and will eventually be unified across LMS and LXP capabilities. This preserves a meaningful element of the gamification experience your learners currently have.

Regarding sign-off: the UAT sign-off criteria require that critical workflows are validated and all Critical issues are resolved. Both conditions are met for Meridian Financial. The Leaderboard gap is an expected limitation — it is not a critical workflow failure, a data integrity issue, or a security concern. It does not meet the definition of a Critical issue under the UAT escalation framework.

I recommend proceeding with sign-off and scheduling the production migration. The Leaderboard gap is documented in the UAT Test Results Summary as a Low priority outstanding item with the March 2027 roadmap target noted. This creates a clear record that the gap was known, accepted, and will be tracked through the roadmap process.

Please let me know if you have additional questions.

UAT Test Results Summary — Completed Known Gaps and Recommendation Sections

Known Gaps Section — Leaderboard

Field	Completed Value
Feature / Function	Leaderboard
Gap Type	☒ Expected Limitation
Description	Leaderboard was not included in the initial Single Architecture migration. This is a known, disclosed feature gap — not a critical workflow failure. Leaderboard functionality from Learning Experience will not be present in the migrated environment.
Roadmap Target	Unified leaderboard tentatively targeted for March 2027. Not a firm delivery commitment.
Interim Alternative	Badges will be migrated and will eventually be unified across LMS and LXP capabilities. A new form of gamification is being developed as a replacement.
Priority	☒ Low
Action Required Before Production Migration	☒ No

Recommendation Section

Field	Completed Value
Recommendation	☒ APPROVED FOR PRODUCTION MIGRATION
Outstanding Items	Item: Leaderboard unavailability. Priority: Low. Roadmap Target: Tentatively targeted for March 2027. Action Required Before Migration: No — expected limitation; disclosed in advance; no customer or partner action required before production migration.

Success Criteria Summary

Your deliverables pass when all of the following are true:

Criterion	Pass Condition
Approved language	Objection response uses "tentatively targeted for March 2027" — no firm date promise
Gap classification	Leaderboard classified as Expected Limitation (not Critical Issue) in UAT Test Results Summary
Priority	Leaderboard gap assigned Low priority
Recommendation	UAT Test Results Summary recommendation is APPROVED FOR PRODUCTION MIGRATION
Outstanding items	Leaderboard gap documented in Outstanding Items with Low priority and March 2027 roadmap target
Partial continuity	Objection response mentions badges as interim gamification continuity
No delay recommendation	Objection response affirms that migration should proceed — does not recommend delay

M05 Lab Guide — Lesson 4 | Prepared by AaGeJa LLC for Cornerstone OnDemand | © 2026 Cornerstone OnDemand
